Profile Summary

Full-stack developer with 3+ years of experience in designing, developing, and deploying scalable web applications. Strong expertise in Python, React, RESTful APIs, microservices architecture, and cloud deployment. Proven experience in end-to-end product development, performance optimization, database design, and system scalability. Adept at working in agile environments, supporting junior developers, contributing to solution design, and delivering secure, high-availability, business-driven software solutions.

Technical Skills

Languages: Python, JavaScript, TypeScript, HTML, CSS

Databases: MongoDB, PostgreSQL

Frameworks/Libraries: React, Angular, Django, Flask, REST API

Cloud & DevOps: AWS, Docker

Tools: Git, Swagger, SonarQube, Netlify

Concepts: Microservices Architecture, Agile Methodologies, Sprint Planning

Experience

Cyber Square AI & Robotics Private Limited - Python Full Stack Software Developer Jan 2023 – Present
On-Site

- Led the migration of 90% of legacy APIs from Python 2 to Python 3, improving system performance, security compliance, maintainability, and long-term scalability.
- Debugged, refactored, and optimized production-grade codebases to enhance application stability, performance, and reliability in live environments.
- Optimized complex database queries and backend workflows, achieving a 20% reduction in page load times and significant improvements in overall system efficiency.
- Designed and integrated Google Image Search functionality using Google Programmable Search Engine and Custom Search JSON API, enabling seamless in-platform image discovery and selection for users.
- Improved code quality, security standards, and maintainability by implementing SonarQube for static code analysis, technical debt monitoring, and continuous code quality enforcement.
- Actively contributed to sprint planning, backlog grooming, and agile ceremonies, ensuring timely delivery of high-quality features and product releases.
- Collaborated with cross-functional teams and supported junior developers through technical guidance, code reviews, and knowledge sharing to strengthen team productivity and engineering standards.

Projects

Mystery Matrix: Competitive Quiz Platform | *React, Python, Docker, MongoDB, Aws, RestApi* GitHub - Private

- Built a scalable microservices-based architecture for leaderboard cron jobs and background processing.
- Containerized services using Docker and deployed to AWS ECS.
- Designed the system to support up to 7,000 concurrent users.
- Implemented REST APIs for secure client-server communication.

Perfect Learning : Learning Management System | *React, Aws* GitHub - Private

- Developed responsive frontend UI using React.
- Implemented modules including User Dashboard, Course Materials, Bookmarks, Practice Tests, and Analytics Dashboard.
- Integrated REST APIs for dynamic data rendering.
